EDUCATION

B.TECH

Walchand Institute Of Technology,
Solapur
Jul 2027

SKILLS

Java, Python, JavaScript, SQL,
HTML5, CSS3

SUMMARY

Computer Science Engineering student with strong expertise in Java backend development. Proficient in Java, Spring Boot, RESTful APIs, and backend system design, with hands-on experience building scalable applications. Skilled in Python with solid knowledge of data structures, databases, and OOP principles. Actively seeking a Software Development Engineer (SDE) Internship to contribute to real-world, high-performance software solutions.

EXPERIENCE

- Present

JPMorgan Chase & Co. Software Engineering Virtual Experience | Forage

- Implemented Apache Kafka in a Spring Boot microservice as part of a guided virtual project to process high-volume financial transactions asynchronously.
- Implemented persistence logic using Spring Data JPA with H2 database to ensure atomic user balance updates.
- Developed RESTful APIs and integrated external services using RestTemplate.
- Tech Stack: Java, Spring Boot, Apache Kafka, Spring Data JPA, H2 Database, REST APIs.

PROJECTS

TicketFlow

Personal Project

- Architected & containerized a microservice platform using Docker Compose, orchestrating 5 services (React frontend, 2 Spring Boot APIs, Postgres, Redis) for decoupled logic and independent scaling.
- Integrated Groq AI (Llama 3) to automate initial ticket triage, analyzing sentiment, predicting priority and category, and generating concise admin summaries—reducing manual review time by ~40%.

- Engineered real-time event-driven architecture with Redis Pub/Sub and WebSockets, delivering UI updates in <200ms, eliminating unnecessary database polling.
- Optimized API performance using Redis caching (@Cacheable), reducing latency by ~75% for read-heavy endpoints and securing routes with JWT-based RBAC.
